

Keras installation

First method:

- Open the main terminal on your machine
- Install TensorFlow by writing: `pip install tensorflow`
- Install Keras by writing: `pip install keras`
- Update all your libraries: `conda update -all`

Second method:

Below are the installation instructions (the Keras package integrates TensorFlow):

- Linux and Mac users, please open your terminal.
On Mac, the easiest way to open it is to press anywhere cmd + space, and then in the Spotlight Search you enter "terminal".
On Linux, you will find it very easily, usually on the left side of your monitor.
Then inside the terminal, copy-paste and enter the following line command:

```
conda install -c conda-forge keras
```

- Windows users, please open the anaconda prompt, which you can find this way: Windows Button in the lower left corner -> List of programs -> anaconda -> anaconda prompt.
Then inside the anaconda prompt, copy-paste and enter the following line command:

```
conda install -c conda-forge keras
```
